PROJECTS

Github User Finder

🔗 URL

Designed and developed a web app using the GitHub API that allows you to find the user's GitHub by searching their name.

Track My Calories

🔗 URL

Designed and developed a web app which tracks your calories for the day by simply entering the foods and amount of calories within those foods.

Learning Log

🔗 https://github.com/nadb主ad/learning_log

Designed and developed a simple web app which allows the user to log topics and the information that they have learnt about the specific topic.

Weather App

🔗 URL

Designed and developed a web app using the OpenWeather API that allows you to check the weather based on your city and country.

EXPERIENCE

Waiter

Copper Club Eatery

📅 09/2019 - 02/2020 📍 Cape Town, ZA

- Greet customers upon entrance.
- Prepare dining tables by arranging condiments, kitchenware and decorations.
- Help patrons select dishes by answering questions about foods and drinks, describing house specialties, and identifying appropriate drink pairings.
- Deliver food to guests in a timely manner and attend to the needs of guests throughout the dining process.

SUMMARY

The moment I saw "Hello World" on the terminal of my first application, I knew that programming was the thing for me.

I've always been interested in technology as young as I can remember.

In my spare time, I like to go to the gym, read the latest tech articles and fiddle around with content creation.

SKILLS

Front-End

HTML & CSS

JavaScript

Bootstrap

Materialize

Back-End

Python

Other

Git
