PROJECTS

MangaDoDs Website - (HTML & CSS, JavaScript)

https://github.com/nadbad/MangaDoDs-Website

Designed and developed a website for a scanlation group. (Scanlation is the fan-made scanning, translation, and editing of comics from a language into another language.)

- Displays all the comics the scanlation group has worked on.
- Fully responsive on all devices.
- Unique design.

GitHub User Finder - (HTML & CSS, JavaScript)

https://github.com/nadbad/Find-the-Github-user

Designed and developed a web app using the GitHub API that allows you to find the user's GitHub by searching their name.

- Displays all the user's information and the 5 latest repositories.

Track My Calories - (HTML & CSS, JavaScript)

https://github.com/nadbad/Track-My-Calories

Designed and developed a web app that tracks your calories for the day by simply entering the foods and the number of calories that those foods contain.

Weather App - (HTML & CSS, JavaScript)

https://github.com/nadbad/My-Weather

Designed and developed a web app using the OpenWeather API that allows you to check the weather based on your city and country.

- Option to display today's weather or the weather for the upcoming 5 days.

SUMMARY

The moment I produced "Hello World" in the console of my first application, I knew I was hooked onto the world of software development.

I've always been interested in technology as a child and had an intense passion for its dynamics, so I immersed myself into working harder with fervor to develop this passion.

In my spare time, I can be found in the gym, reading the latest tech articles or working on content creation.

SKILLS

Front-End

HTML & CSS   **JavaScript**   **Bootstrap**

Materialize

Back-End

Python

Other

Git
